Magazzino rotante "3G-rs"

Dye itself is the most important element during the dyeing process and its exact weighing is absolutely mandatory. This precision is dependent on two factors: right sort of dye and

right amounts. The manual weighing supported by 3G-rs always provides the right and reliable solution. With data transferred from the recipe software, it directs you to the right type of dye and correct amounts to be weighed. Two high capacity-high precision scales connected to the system ensure correct result. This precision is accomplished at a fraction of the cost of a fully automatic system.

The automatic position feature of paternoster operates in conjunction with 3G-rs. It rapidly finds and retrieves the dye and directs you towards the dye with its lamps. Vacuum cleaner with dust abatement in water. The vacuum system is connected to the rotating storage with flexible pipe.

Shelf Length	Shelf Depth	Max Box Height	Box Capacity	N. of Shelves	Total Box Capacity	Machine Height
4.500	450	730	10	8	80	4.850
4.500	450	730	10	6	60	3.620
4.500	450	640	10	6	60	3.350
